

# Precautions in our school

## primary education

We can safely go to school if everyone does the following:

### Pupils and staff stay at home:

- Nose cold, coughing, difficulty breathing/tightness of the chest, sudden loss of smell or taste, or a fever above 38 °C.
- Also stay at home if a family member has a fever above 38 °C and/or an anxiety disorder.
- 24 hours without symptoms = back to school.

### Risk groups

Pupils and educational staff who belong to the at-risk group, or whose family members belong to the at-risk group, can stay at home. Contact the school management and the attending physician about this.

**Breaks** are preferably only held with your own group or class.

**After school**, everyone goes straight home or to out-of-school care.

### Distance

- Between children: 1.5 m distance not necessary.
- Between teaching staff and child: preventively 1.5 m distance wherever possible (less distance poses no danger, but see what can be done).
- Between adults: always 1.5 m distance.

### Wash your hands more often and use paper towels

### Cough and sneeze on the inside of your elbow

### Use paper handkerchiefs

### Do not shake hands

alleen samen krijgen we  
corona onder controle
